PAPER-PULP MEAL TRAYS

98% Biodegradable—A Green Solution to Meal Packaging
Manufactured from a renewable material source
Recyclable and compostable

- Paperbased tray insulates the meal keeping it hot for longer than foil, and keeping the outside of the tray cool for safe handling by staff and customers.
- Easy to open proprietary film; easy to peel for even weaker or arthritic hands, yet strong enough for the rigours of delivery.
- Clear film seal is micro-perforated allowing steam to vent and preventing steam burns to the fingers upon opening of hot meals. As there is minimal condensation build-up, the food remains clear to see and appetising to the end customer.
- Each compartment is separately sealed, preventing foods from mixing or sauces / gravy from overflowing, and making trays suitable for the transport of messier meals like stews or casseroles.
- Filled trays can be stacked for easy storage and delivery.
- Robust trays can be filled with hot food and then stored in a bain-marie or oven until delivery to the consumer. Meal-filled trays can be refrigerated, frozen, microwaved or reheated in a conventional oven. Filled and sealed trays can also be stacked easily for ease of packing and distribution.
- The trays are 98% biodegradable and can be composted, recycled, or if they end up in general waste, they will biodegrade within a few weeks.
