## **Tekspek Solutions**

***A Green Solution to Meal Packaging Manufactured from a renewable material source recyclable and compostable, 98% biodegradable***

Paperbased tray insulates the meal keeping it hot for longer than foil or plastic. The external tray wall is cool to the touch allowing safe handling of hot meal by staff and customers.

Easy peel proprietary film; yet strong enough for the rigours of transport if required.

Clear film seal is micro-perforated allowing excess steam to vent when meal is hot, preventing fogging build up on the interior of the film lidding.

Each compartment is separately sealed, preventing foods from mixing or sauces / gravy from overflowing, and making trays suitable for the presentation of sauce type meals or stews or casseroles etc.

Filled trays can be refrigerated, frozen, microwaved or reheated in a conventional oven. Filled and sealed trays can also be stacked 10 high for ease of storage or display.
